

# 6 PHASES

# ERP IMPLEMENTATION PLAN

## 1. Discovery and Planning

Create project team. Identify current issues and potential solutions. Construct project plan.

## 2. Design

Work out configurations for new system. Define roles. Document standard procedures.

## 4. Testing

Fine tune configuration. Ensure system's functionality aligns with set requirements for project.

## 3. Development

Prepare entire system for going live. Complete customizations. Develop user training. Import data.

## 5. Deployment

Assess situation and make final go or no-go decision. Final data loaded and validated. Train employees.

## 6. Ongoing Support

As the way users work within system evolves, adjustments and changes to system may be needed.
